OUR BUSINESS

LAN & PC Services (LPS) was founded in 1995 to combine a generalist's perspective with a specialist's skill. Our business assists with installations, provides service and product support, and offers value-added options for both networks and standalone PCs.

We have derived our expertise from observing and learning about technology for over 20 years, and, in the process, we've serviced clients with increasingly complicated repairs.

LPS provides practical solutions to manage your business by integrating operations, finance, and sales departments under one network infrastructure. And our background with emerging companies helps provide efficiency and productivity within your firm's budget.

Our business also offers long-term technical assistance and general I.T. support. Service areas include:

| | |
|------------------------|-----------------------|
| Anti-virus protection | Remote access |
| Email/exchange servers | VLANs |
| Firewalls | VoIP systems |
| Network cabling | WAN design/setup |
| Network monitoring | Web sites |
| Network servers | Wireless design/setup |

Most importantly, our turnaround time will get you up and running within eight business hours, even if we have to do a quick patch or supply a loaner while working on a more complicated matter.

Jeff Higgins, Principal and Founder

Matt Laird, Principal

OUR STAFF

No company is better than the staff that runs it. LAN & PC Services offers a broad range of background and expertise to its clients. With specialists in nearly every computer discipline, LPS provides the right person for your specific needs.

The following experts are full-time staff members and an indication of the dedication and skills we require from all our employees.

Jeff Higgins, Principal and Founder: Jeff founded LPS in 1995 to offer "Best of Class" computer products for small and large corporate networks. With over 20 years of experience in the industry, Jeff has designed corporate Wide Area Networks (WANs) for Prudential, Verizon and similar firms. Jeff is a certified CNE and MCSE.

Matt Laird, Principal: Matt's 15-year career includes engineering or LAN administration with IBM, Reference Systems and other firms. A NetWare administrator and Netframe server specialist, he is certified or pending certification in Compaq ASE, HP ASE, Microsoft MCSE and Citrix remote-communications software.

Christopher Chiera: Chris has four years of computer and network experience in mobile electronics, wireless networks, PC and automotive integration, virus and network security solutions, data recovery, wireless handheld devices, and remote access solutions for Citrix, network PC setup and LAN administration.

Jim Fetcho: A graduate of the Chubb Institute, Jim's five years of I.T. background includes large pharmaceutical and financial firms. He is certified or pending certification in MS Exchange, Blackberry's, Active Directory, A+, Network+, Microsoft MCSE and MS Exchange.

Rick Grisanti: Rick holds a B.S. in Computer Engineering from SUNY New Paltz. He spearheaded a design team to create a high-speed data communications network using Free Space Optics. His five-year background includes hardware and network architecture and expertise in several different programming languages.

Carmen Mazza: Certified in A+, MCP+ Internet, MCSE for NT 4, and CCNA, Carmen has worked for ten years in graphic and web site design, nine years installing hardware and software applications, and has repaired servers, workstations, routers, switches and firewalls.

OUR CLIENTS
